*The Air outlets noise (45° angle, 1.5meters in front of the unit) is about 22dB greater than the indicated value (at Fan speed 4).

*For the specification at the other frequency contact your dealer.

*Use this unit with static pressure 250Pa or less. If air speed 250Pa. Otherwise the noise level might be larger.

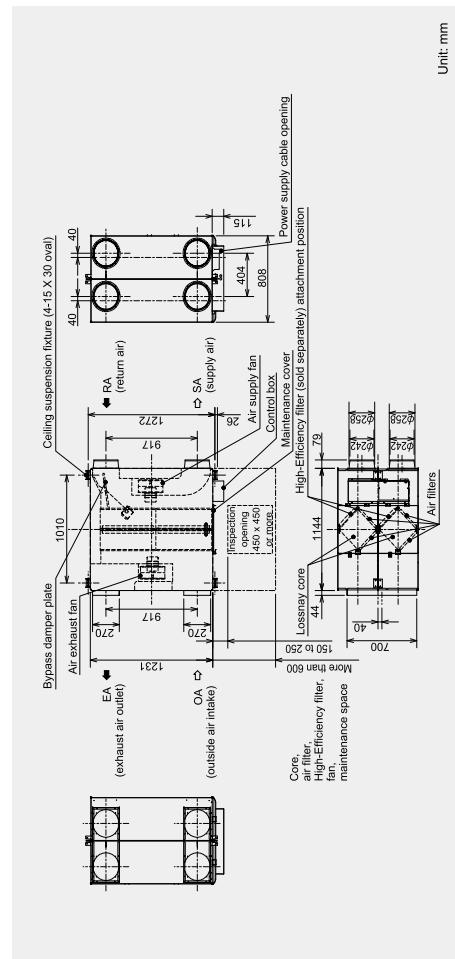

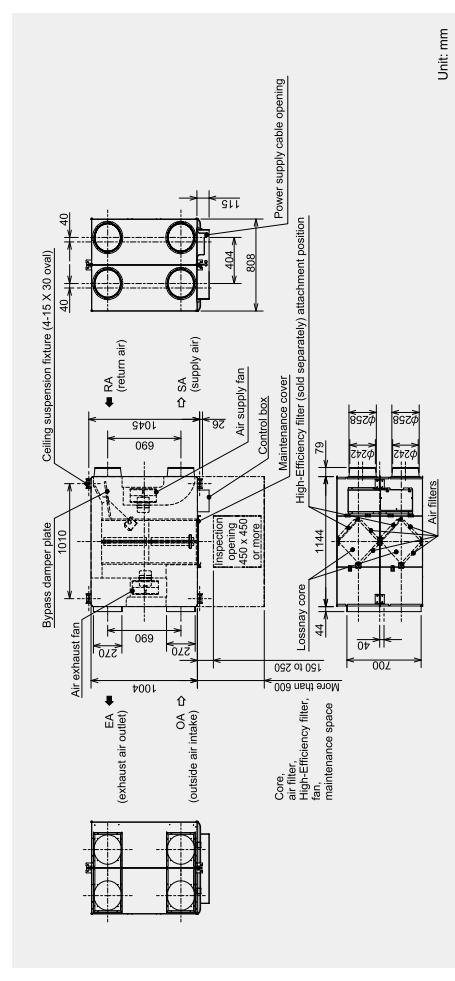

*The Air outlets noise (45° angle, 1.5meters in front of the unit) is about 21dB greater than the indicated value (at Fan speed 4).

**The running current, the input power, the efficiency and the noise are based on the rating air volume, and 230V/50Hz.

*For the specification at the other frequency contact your dealer.

*Use this unit between static pressure 50Pa and 250Pa at Fan speed 4. Otherwise the motor protection may work and reduce its output or the noise level might be larger.
